Ziehl-Abegg, a progressive company with Tradition

Those who want the best trust in Ziehl-Abegg. Wherever a lift is moving, or buildings or facilities are air conditioned, it's often Ziehl-Abegg's latest technology which is to be found playing its part.

In 1910, Mr. Emil Ziehl established the foundations which enable Ziehl-Abegg's present market leading position in the lift drive motor market sector, as well as the ventilation and air conditioning market sector.

In 1949 after the war, Ziehl-Abegg OHG was newly founded in Kuenzelsau by the brothers Heinz and Guenter Ziehl.

Ziehl-Abegg has always possessed the critical expertise and knowledge required to enable the transfer of technology from one market sector to another, and to understand and respond to customers' needs and requirements. This has resulted in Ziehl-Abegg having a head-start in the market, which continues to this day.

More than 2500 employees are working for Ziehl-Abegg worldwide. Today, nearly a century after Emil Ziehl's pioneering work, the company continues delivering advanced technology in the fields of air movement, motors and motor drives, and electrical controls, from Kuenzelsau to the whole world. In most countries throughout the world, we are represented locally.

With a wide range of top quality products, we offer tailored system solutions to our customers, all from one source. From the beginning to the end, Ziehl-Abegg customers are offered guidance and support in all phases of their projects.

Ziehl-Abegg headquarters, Kuenzelsau

Ziehl-Abegg Medium pressure fan production, Villieu

Energy saving IE2 motor is the new standard for MAXvent2

New energy laws and impending regulations in the EU on minimum efficiencies require significant energy consumption reductions in air conditioning systems. Directive 2005/32/EC with regard to ecodesign requirements for electric motors will introduce minimum efficiencies for such motors starting June 16th, 2011. This means that throughout Europe, solely energy-saving motors will be permitted for use in new plants.

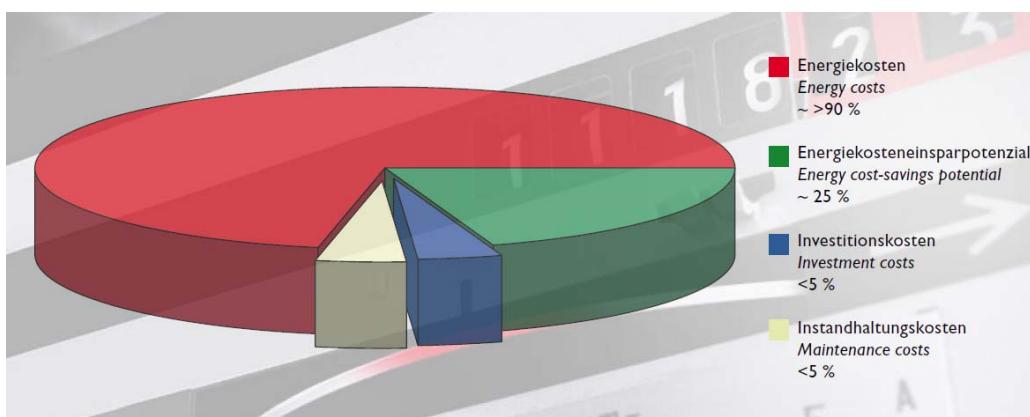

In anticipation to the EU regulation and starting April 2011, Ziehl-Abegg will supply MAXvent 2 Medium Pressure Axial Fans with IE 2 motors. The IE2 system will be offered without extended delivery times, and at a price which is only minimally higher than the previous systems with IE1 motors allowing a very fast pay back.

In addition to the cost savings enjoyed by users, the environment will also benefit from the reduced energy requirements. At about 160,000 kWh of power to drive motors per year, using IE2 motors can prevent up to 20,000 tons of CO₂.

Use the energy-saving potential

IE2 motors, when compared with IE1 motors, offer efficiency improvements of up to 10%. In total cost calculations for motor-driven ventilation systems over a ten year period, the cost proportion for energy is more than 90%. By using energy-efficient class IE2 motors, energy losses are reduced by up to 30% and as a consequence, energy cost savings can be realised, when compared with IE1 products.

At an energy price of 0.11 €/kWh, running a 7.5 kW, 4-pole IE2 motor rather than an IE1 motor, can save 34€ per 1 000 operating hours. While continuous operation of the fan almost 300€ of energy costs can be saved per year.

Cost distribution across 10 years

Nature does not waste energy - neither do we!

Example calculation for energy savings

Motor 7.5 kW, 4 pole

IE1 motor h = 87 %

Pinput = 8.62 kW

Ploss = 1.12 kW

IE2 motor h = 90.2 %

Pinput = 8.31 kW

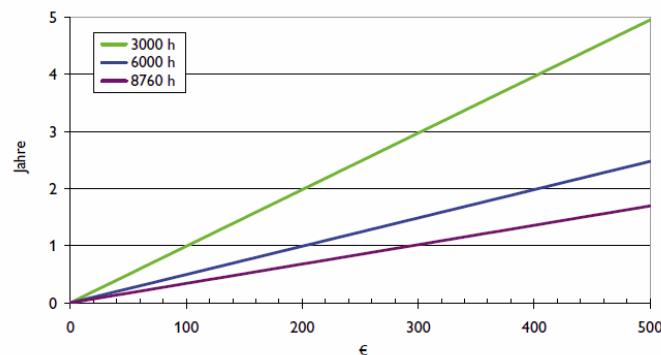

Ploss = 0.81 kW

Energieeinsparung

Motor 7,5 kW, 4-polig

Energy savings

Motor 7.5 kW, 4 pole

Efficiency difference (only) 3.2 % ≈ 27 % lower loss

The MAXvent 2 Range

The MAXvent 2 range is the evolution of a proven existing axial medium pressure range, in response to the actual market requirements in terms of aeraulic performances, low noise level and breadth of range.

We offer two configurations in standard, short and long casing designed to the EUROVENT standard dimensions. Thanks to the efficient design and proven components, we can ensure the high quality and reliability of the MAXvent 2 range of fans.

We have been working countless hours and still are, in order to improve day after day our range of fans and bring you the best performances and highest reliability. Answering your technical requirements and needs is our goal.

Technical description

The axial MAXvent 2 range fans are constructed with impellers made of glass reinforced polyamide blades (PAG) and aluminium alloy hubs. These impellers have been designed for applications needing products capable of working at a total pressure of 1000 Pa. According to the pressure drop of your application, diameter and speed of the selected fan, available airflow goes up to 130 000 m³/h.

Airflow measurements are done according to ISO 5801 standard

A wide range:

The MAXvent 2 axial range fans are available in 13 diameters:

315, 355, 400, 450, 500, 560, 630, 710, 800, 900, 1000, 1250 and 1400 mm.

MAXvent 2 axial range fans are constructed with standard asynchronous internal rotor motors, conforming to the IEC standards. These motors are a B3 type of construction, IP55 and class F, with PTC thermistors.

They are available in three-phase 230/400V 50Hz up to 2,2kW and 400VΔ above.

Depending on the diameter, the motors are available in 2, 4, 6 or 8 poles configurations.

For each diameter and each speed of rotation, the range includes 5 impeller blade angles – a total of almost 185 possible combinations to satisfy any request:

Ø	2 poles	4 poles	6 poles	8 poles
315	✓	✓		
355	✓	✓		
400	✓	✓	✓	
450	✓	✓	✓	
500	✓	✓	✓	
560	✓	✓	✓	
630	✓	✓	✓	✓
710		✓	✓	✓
800		✓	✓	✓
900		✓	✓	✓
1000		✓	✓	✓
1250		✓	✓	✓
1400			✓	✓

Depending on your requirements, we propose to you several constructions: either short casing, long casing or square plate with specific dimensions, for installation in ducted systems or for use with industrial processes.

All the components in the MAXvent 2 range are protected against corrosion and can be painted on request.

Standard Configurations

The MAXvent 2 standard versions are constructed with:

- Impellers made with glass reinforced polypropylene blades, selected by us for your application and balanced according to IEC 1940 standard (G = 6.3)
- IEC-IE2 B3 lug-mounted motors, SIEMENS or similar brand (cable gland not supplied)
- Steel Casings.

The fans are supplied on pallets

There are two anti-corrosion finishes:

- Pre-galvanized steel
- Hot dip galvanized steel

These fans can operate either horizontally or vertically and are available in both airflow directions.

The fans are directly coupled: the impeller is mounted directly on the motor shaft.

In the standard configuration, they can be used in any application with clean air in a dust free environment.

The temperature of the airflow should be between -30 °C and +50 °C for fans in the "Standard temperature range" section and between -30 °C and +60°C for fans in the "Increased Temperature Range" section.

Accessories:

Speed controllers, mounting feet, Anti-vibration mounts, matching flanges, inlet bell mouth, flexible connector, protective grilles (impeller or motor side).

Special Configurations

Ziehl-Abegg FMV can offer special configurations which answers specific needs, such as:

- Square plate design for all diameters, with dimensions adapted to the application.
- Stainless steel 304 or 316L or polyester powder paint finish
- Impeller with aluminium blades or glass reinforced polypropylene blades (PPG)
- Motor
 - 2 speeds (star/delta or Dahlander)
 - 60Hz
 - PTO thermistors
 - High or low temperatures
 - Terminal box remotely mounted on the casing
 - All IEC motors options
 - And many other possibilities

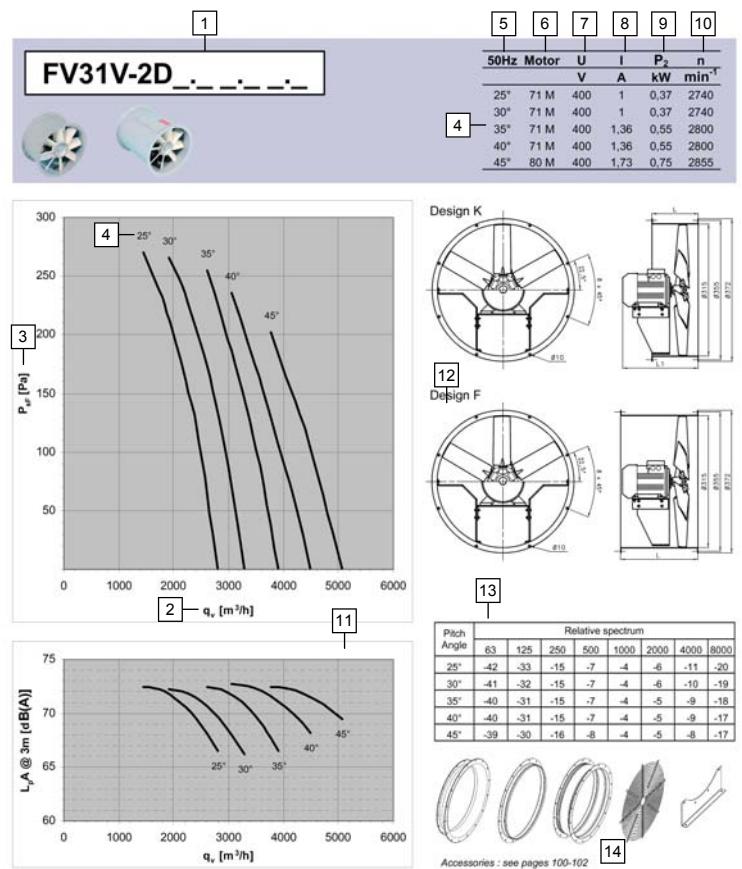

We study any request concerning non standard products.
...Don't hesitate to ask us!

Designation

Aeraulic measurements:

Fan characteristic curves show a Δ psf pressure increase in Pa as a function of airflow in m^3/h

Aeraulic tests were conducted as per ISO5801 in our laboratories ("Invent" laboratory in Germany and ZA-FMV laboratory in France).

A complete set of measurements taken in our laboratories enabled us to establish the curves presented below.

Measurements were taken in type A, with long casing, with full bellmouth and without safety guard.

Some tests were corroborated by the CETIAT (approved French laboratory)

The fan is installed in a measurement box with free intake and outflow.

Acoustic measurements:

Acoustic tests were conducted as per ISO13347.

Acoustic powers with A weighting in Lw are calculated from acoustic pressure levels in octave bands measured at the suction side of the fan.

Sound level pressures are measured according to the 9-point enveloping surface method over a hemispherical surface, as described in the ISO 13347-3 standard

A weighting uses an octave band correction to allow for the sensitivity of the human ear to certain frequencies.

To obtain the acoustic power level of a fan from the acoustic pressure level at 3 metres, the following formula can be used:

$$L_w = L_p (@ 3m) + 10 \cdot \log (2\pi \cdot R^2) + 20 \cdot \log (3), \quad \text{where } R = 1$$

To obtain the acoustic power level as a function of the octave range spectrum, the following formula can be used:

$$L_w = 10 \cdot \log \left(\sum 10^{(0.1 \cdot L_{wi})} \right), \quad \text{where } i = \text{octave band}$$

Caution: some national measurement standards (e.g. BS 848) use measurements taken at distances different from those used in the ISO standards. Depending on the fan size, the sound data obtained is likely to be significantly lower than the one found when measured according to the ISO standards.

« Invent » Laboratory, Ziehl-Abegg AG, Germany

General tolerances:

- On flow rates : $\pm 5\%$ of nominal flow rate
- On acoustic power and pressure levels : $\pm 3\text{dB}$
- By octave band: $\pm 5\text{dB}$

Air Inlet bellmouth and its effect on aeraulic and acoustic measurements:

Tests were conducted with an optimised bellmouth designed to:

- Minimise integration effects responsible for reduced airflow and for the appearance of a stall point at a lower pressure than specified.
- Optimise the motor consumption
- Minimise integration and stall noise

Moreover, it is important to ensure proper air intake when the fan is installed by allowing a minimum integration distance equivalent to approximately one fan's diameter.

Acoustic system effect and safety guard:

Safety distances to prevent access to hazardous areas are specified in the EN 294 standard .

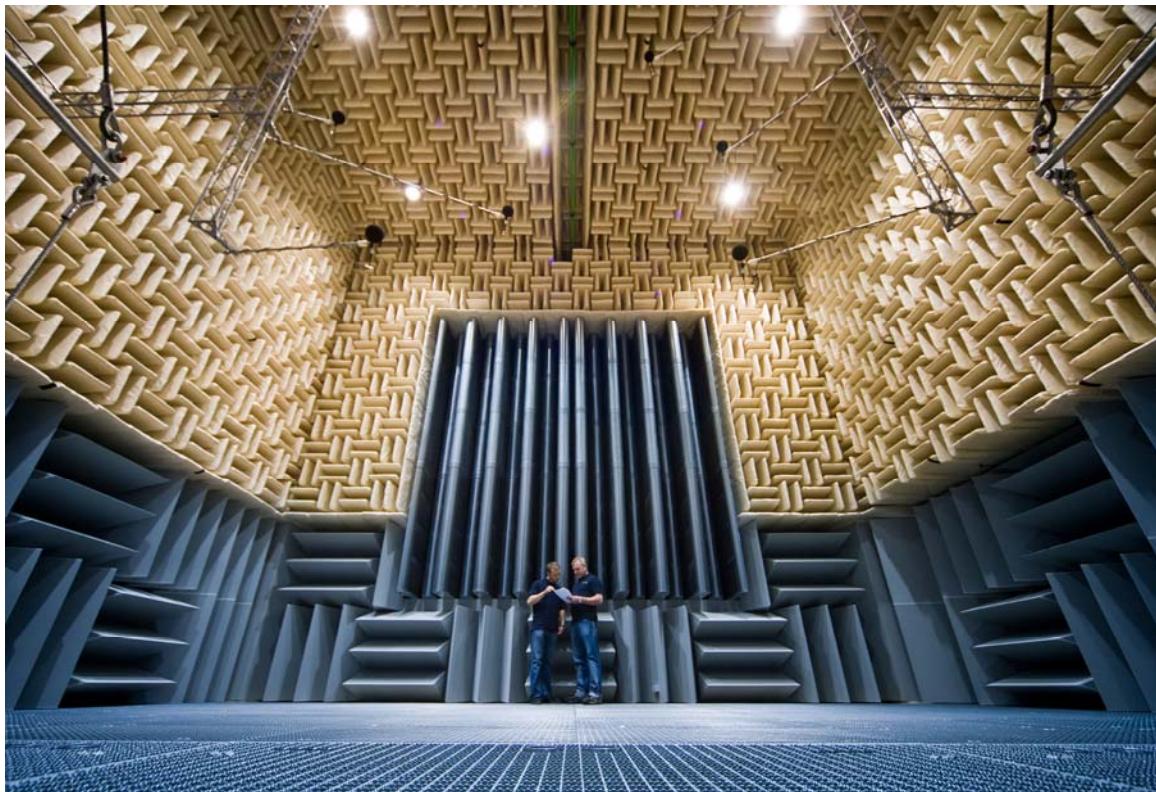

The use of safety guards is recommended for this purpose. Guards generate resistance to air flow that represents a pressure loss Δpsf for the fan. Pressure loss increases with the square of the fan flow rate.

Fan electrical consumption and sound level are also affected. Guards are proposed as accessories.

Safety information:

The Ziehl-Abegg axial fans are designed to operate inside systems and are merely components of these systems.

The machine manufacturer must satisfy equipment or system safety specifications as per the EN 294 standard .

« Invent » Laboratory, Ziehl-Abegg AG, Germany

La gamme MAXvent 2

La gamme MAXvent 2 est née d'une part d'une gamme existante depuis plusieurs années dans le domaine de la ventilation moyenne pression, et d'autre part des efforts des équipes ZIEHL-ABEGG FMV pour répondre à vos besoins spécifiques en terme de performance aéraulique, de faible niveau sonore, d'avantages techniques et de largeur de gamme.

Deux configurations sont proposées en standard : virole courte et virole longue aux dimensions de la norme EUROVENT. Grâce à son design éprouvé et aux composants de marque utilisés, nous pouvons garantir la qualité et la fiabilité des ventilateurs de la gamme MAXvent 2.

Nous consacrons aujourd'hui comme hier nos ressources à l'amélioration de nos gammes de ventilateurs dans le but de vous fournir le maximum de performance et de satisfaire l'ensemble de vos exigences techniques.

Description technique

La gamme de ventilateurs hélicoïdes MAXvent 2 est équipée d'une hélice avec des pales en polyamide renforcé fibre de verre (PAG) et un moyeu en alliage d'aluminium (fonderie) conçue pour des applications allant jusqu'à des pressions totales de 1000 Pa selon le diamètre.

En fonction de la perte de charge de votre installation, du diamètre et de la vitesse de l'hélice sélectionnée le débit disponible peut atteindre 130 000 m³/h .

Les débits sont mesurés selon ISO 5801.

Une large gamme:

La gamme MAXvent 2 est disponible en 13 diamètres : 315, 355, 400, 450, 500, 560, 630, 710, 800, 900, 1000, 1250 et 1400 mm.

Les ventilateurs de la gamme MAXvent 2 sont équipés de moteurs asynchrones à rotor intérieur normalisés (IEC). Il s'agit de moteurs à pattes B3, IP55, classe F disponibles en triphasé 230/400V 50Hz jusqu'à 2,2kW et 400/690V 50Hz au-delà avec protection par thermistances PTC.

Selon le diamètre, les moteurs sont disponibles en 2 pôles, 4 pôles, 6 pôles ou 8 pôles.

Pour chaque diamètre et chaque vitesse de rotation la gamme comporte 5 angles d'hélice, au total 185 combinaisons possibles afin de répondre à toutes les demandes:

Ø	2 pôles	4 pôles	6 pôles	8 pôles
315	✓	✓		
355	✓	✓		
400	✓	✓	✓	
450	✓	✓	✓	
500	✓	✓	✓	
560	✓	✓	✓	
630	✓	✓	✓	✓
710		✓	✓	✓
800		✓	✓	✓
900		✓	✓	✓
1000		✓	✓	✓
1250		✓	✓	✓
1400			✓	✓

En fonction de votre besoin, nous pouvons vous proposer une solution en virole courte ou longue ou une solution sur plaque carrée aux dimensions adaptées à votre besoin que ce soit en application en gaine ou en application process industriel.

Par ailleurs sont disponibles sur demande toutes les options des moteurs normalisés.

Tous les composants des ventilateurs de la gamme MAXvent 2 sont protégés contre la corrosion et peuvent être peints sur demande.

Configurations standard

La gamme de ventilateurs MAXvent 2 est équipée:

- d'une hélice en matériau composite sélectionnée par nos soins pour votre application et équilibrée selon les prescriptions de la norme ISO 1940 (G = 6.3)
- d'un moteur IEC-IE2 à pattes B3 de marque SIEMENS ou similaire (presse-étoupe non fourni)
- d'une virole en acier .

Conditionnement sur palette.

Deux finitions anticorrosion :

- Casing en acier galvanisé ou zingué
Casing en acier galvanisé à chaud

Ces ventilateurs peuvent fonctionner indifféremment, axe horizontal ou vertical et sont disponibles pour les deux sens de flux d'air.

Ces ventilateurs sont en accouplement direct: l'hélice directement placée en bout d'arbre du moteur.

Ils peuvent être utilisé en application standard dans toutes applications où l'air véhiculé est propre, non poussiéreux.

La température du flux d'air doit être comprise entre -30°C et +50°C pour les ventilateurs de la section "Standard temperature range" et -30°C et +60°C pour les ventilateurs de la section "Increased Temperature Range".

Accessoires

Variateurs de vitesse, pieds de montage, plots anti-vibratiles, viroles d'entrée d'air, contre-brides, viroles élastiques, grilles de protection (côté hélice ou côté moteur).

Configurations spéciales

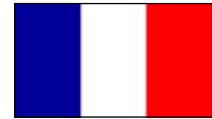

Ziehl-Abegg FMV peut offrir des configurations sur mesure qui répondent au mieux aux besoins de ses clients tel que :

- Construction avec plaque carrée (tous diamètres) adaptée à l'environnement du client
- Construction en acier inoxydable (304 ou 316L) ou finition peinture poudre polyester
- Hélice avec pale aluminium ou polypropylène chargé fibre de verre (PPG)
- Moteur
 - 2 vitesses (bobinages séparés ou Dahlander)
 - 60Hz
 - Thermistances PTO
 - Utilisation basse ou haute température
 - Boite à bornes déportée sur la virole
 - Toutes les options des moteurs IEC
 - Et beaucoup d'autres possibilités

Nous étudions toute demande différente de nos produits standard.

Désignation

Mesures aérauliques:

Les courbes caractéristiques du ventilateur montrent l'augmentation de pression ΔP_{sf} en Pa en fonction du débit en m^3/h .

Les tests ont été réalisés suivant ISO5801 pour l'aéraulique et au sein de nos laboratoires (laboratoire "Invent" en Allemagne et laboratoire ZA-FMV en France).

Tout un ensemble de mesures effectuées dans nos laboratoires nous ont permis d'établir les courbes présentées ci-après.

Les mesures ont été réalisées en type A, avec virole longue, avec virole d'entrée d'air et sans grilles de protection.

Certains tests ont été corroborés par le CETIAT (laboratoire français agréé).

Le ventilateur est installé dans un caisson de mesures à entrée et sortie libres.

Mesures acoustiques:

Les tests ont été réalisés suivant ISO13347 pour l'acoustique. Les puissances acoustiques pondérées A en L_w sont calculées à partir de niveaux de pression acoustique en bandes d'octave mesurées à l'aspiration du ventilateur.

Les pressions de niveau sonore sont mesurées selon la méthode de la surface enveloppante en 9 points sur une surface hémisphérique décrite dans la norme ISO 13347-3

La pondération A tient compte de la sensibilité de l'oreille humaine à certaines fréquences par une correction en bande d'octave.

Détermination du niveau de puissance acoustique d'un ventilateur à partir du niveau de pression acoustique à 3 mètres:

Détermination du niveau de puissance acoustique en fonction

$$L_w = L_p (@ 3m) + 10 \cdot \log (2\pi \cdot R^2) + 20 \cdot \log (3), \quad \text{avec } R = 1$$

du spectre en gamme d'octaves:

$$L_w = 10 \cdot \log \left(\sum 10^{(0.1 \cdot L_{wi})} \right), \quad \text{avec } i = \text{bandes d'octaves}$$

Attention certains anciens standards nationaux de mesures (ex BS 848) font appel à des mesures effectuées à des distances différentes des normes en vigueur. Ces anciens standards peuvent conduire à des valeurs acoustiques minorées de façon significative selon la taille du ventilateur.

Laboratoire "Invent", Ziehl-Abegg AG, Allemagne

Tolérances générales:

- Sur les débits : $\pm 5\%$ du débit nominal
- Sur les niveaux de pression et de puissance acoustique : $\pm 3\text{dB}$
- Par bande d'octave : $\pm 5\text{dB}$

Viroles d'entrée d'air et ses effets sur l'aéraulique et l'acoustique :

Les essais ont été effectués avec un pavillon d'entrée d'air optimisé permettant :

- De minimiser les effets d'intégration responsables de la diminution du débit et de l'apparition d'un point de pompage à une pression plus basse que prévue.
- D'optimiser la consommation du moto-ventilateur
- De minimiser le bruit d'intégration et de pompage

Par ailleurs il est important d'assurer une bonne entrée d'air quand le ventilateur est installé en respectant une distance minimum d'environ 1 fois le diamètre du ventilateur.

Effet système acoustique et grille de protection :

Les distances de sécurité pour prévenir l'accès avec les zones dangereuses sont spécifiées dans la norme EN 294. Dans ce but nous préconisons l'utilisation de grilles protectrices.

Les grilles occasionnent une résistance au passage du flux d'air qui représente une perte de pression ΔP_{sf} pour le ventilateur, cette perte de pression augmente avec le carré du débit du ventilateur.

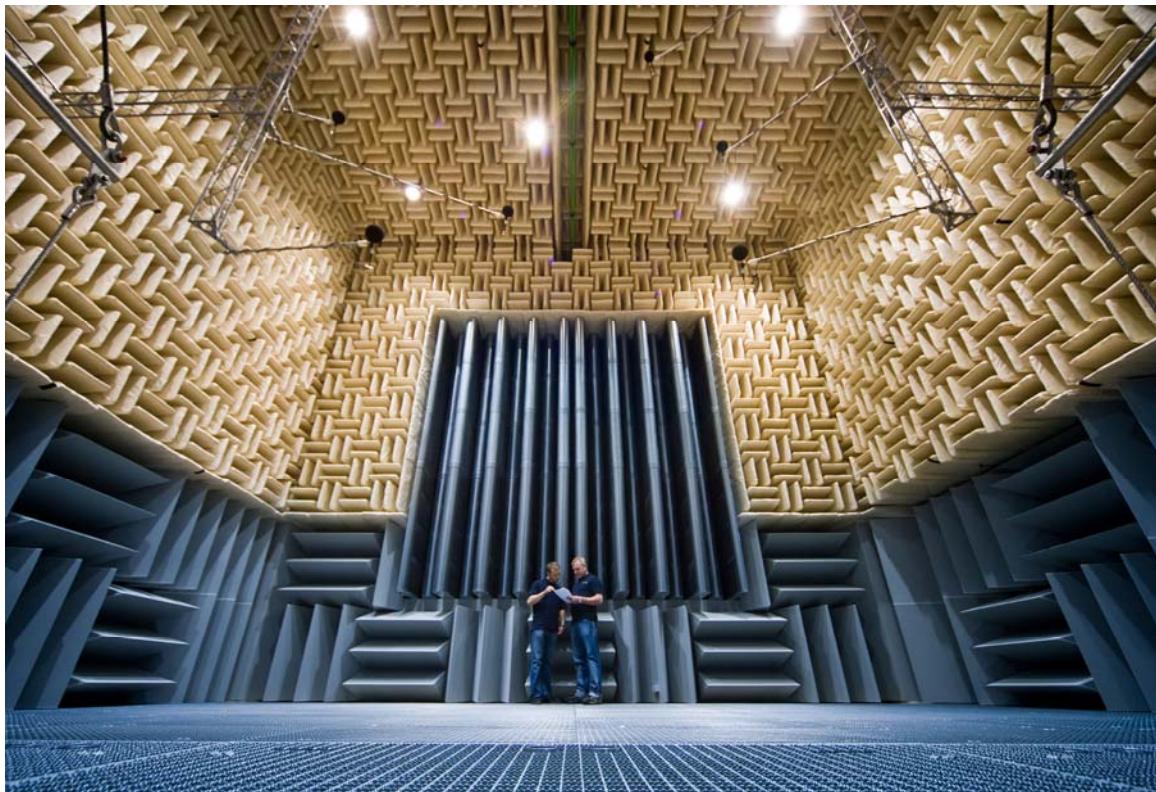

La consommation électrique et le niveau sonore du ventilateur sont également affectés.

Les grilles de protection sont proposées en tant qu'accessoires.

Information sur la sécurité :

Les ventilateurs axiaux Ziehl-Abegg sont conçus pour fonctionner à l'intérieur de systèmes et ne sont que des composants de ces systèmes

Le fabricant de la machine doit répondre aux spécifications de sécurité des équipements ou du système selon la norme EN 294.

Laboratoire "Invent", Ziehl-Abegg AG, Allemagne

Produktreihe MAXvent 2

Die Produktreihe MAXvent 2 baut zum einen auf eine seit mehreren Jahren bestehenden Produktreihe im Bereich der Mitteldruckventilatoren auf. Zum anderen ist sie Ausdruck unseres Engagements, auf den spezifischen Bedarf unserer Kunden in den Bereichen Luftleistung, geringen Schallpegels, technischer Optimierungen und Umfang der Produktreihe einzugehen.

Standardmäßig werden zwei Ausführungen angeboten: kurzes und langes Rohrgehäuse entsprechend den Maßen der EUROVENT-Norm. Durch sein anerkanntes Design und seine hochwertigen Komponenten können wir für die Qualität und Zuverlässigkeit der Ventilatoren unserer Produktreihe MAXvent 2 garantieren.

Wir investieren kontinuierlich in die Verbesserung unserer Ventilatoren mit dem Ziel, Ihnen maximale Leistung zur Verfügung zu stellen und Ihren gesamten technischen Anforderungen zu entsprechen.

Technische Beschreibung

Die Produktreihe der MAXvent 2 Ventilatoren ist mit einem Laufrad aus durch Glasfaser verstärktem Polyamid (PAG) und einer Nabe aus einer Aluminium-Druckguss ausgestattet. Dieses wurde speziell für Applikationen entwickelt, bei denen je nach Durchmesser ein Gesamtdruck von bis zu 1000 Pa auftritt.

Je nach Druckabfall Ihrer Installation, Durchmesser und Geschwindigkeit des gewählten Laufrads kann die verfügbare Luftleistung bis zu 130 000 m³/h erreichen. Die Leistung wird gemäß ISO 5801 bemessen.

Eine umfangreiche Produktreihe:

Die Produktreihe MAXvent 2 besteht aus 13 Durchmessern: 315, 355, 400, 450, 500, 560, 630, 710, 800, 900, 1000, 1250 und 1400 mm.

Die Ventilatoren der Produktreihe MAXvent 2 sind mit genormten asynchronen Innenläufermotoren (IEC) ausgestattet. Es handelt sich um B3 Fußmotoren, IP55, Klasse 5, die bis zu 2,2kW dreiphasig mit 230/400 V 50 Hz und darüber mit 400/690 V 50 Hz mit PTC Thermistoren (Kalteiter) verfügbar sind.

Je nach Durchmesser sind die Motoren 2-, 4-, 6- oder 8-polig erhältlich.

Für jeden Durchmesser und jede verfügbare Drehzahl umfasst die Produktreihe 5 Anstellwinkel, insgesamt also an die 185 mögliche Kombinationen, um auf jeden Bedarf eingehen zu können:

Ø	2 polig	4 polig	6 polig	8 polig
315	✓	✓		
355	✓	✓		
400	✓	✓	✓	
450	✓	✓	✓	
500	✓	✓	✓	
560	✓	✓	✓	
630	✓	✓	✓	✓
710		✓	✓	✓
800		✓	✓	✓
900		✓	✓	✓
1000		✓	✓	✓
1250		✓	✓	✓
1400			✓	✓

Je nach Bedarf können wir Ihnen eine Lösung mit kurzem oder langem Rohrkanal oder auch eine Lösung auf quadratischer Platte entsprechend den von Ihnen gewünschten Dimensionen anbieten, egal ob es sich um eine Anwendung in einem Rohrsystem oder um eine industrielle Prozessapplikation handelt.

Auf Anfrage sind alle typischen Optionen für genormte Motoren erhältlich.

Alle Komponenten der Ventilatoren der MAXvent 2 Produktreihe sind korrosionsgeschützt und können auf Anfrage beschichtet werden.

Standardausführungen

Die MAXvent 2 Ventilatorproduktreihe ist ausgestattet mit:

- einem Laufrad aus Verbundstoff, das wir entsprechend Ihrer Anwendung sorgfältig auswählen und gemäß den Vorschriften der Norm ISO 1940 (G = 6,3) wuchten
- einem B3 Fußmotor IEC-IE2 der Marke SIEMENS oder gleichwertig (Kabelverschraubungen sind nicht enthalten)
- einem Rohrkanal aus Stahl

Lieferung auf Palette.

Die Gehäuse werden entweder aus verzinktem Stahl oder aus feuerverzinktem Stahl gefertigt.

Die Ventilatoren können sowohl mit waagrechter als auch mit senkrechter Achse betrieben werden. Beide Luftförderrichtungen sind erhältlich. Das Rad befindet sich auf der Antriebswelle des Motors und wird somit direkt angetrieben.

MAXvent 2 Ventilatoren können für alle Standardapplikationen angewendet werden, bei denen die bewegte Luft sauber und staubfrei ist.

Die Fördermitteltemperatur liegt bei den Ventilatoren der Gruppe "Standard temperature range" zwischen -30° C und + 50°C, bei den Ventilatoren der Gruppe "Increased Temperature Range" sind Temperaturen zwischen -30°C und +60°C zulässig.

Zubehör

Drehzahlregler, Montagefüße, Schwingungsdämpfer, Einstromdüsen, Gegenflansche, elastische Stutzen, Schutzgitter (Laufradseite oder Motorseite).

Sonderausführungen

Ziehl-Abegg FMV kann spezifische Ausführungen anbieten, die genau auf die Anforderungen der Kunden abgestimmt sind:

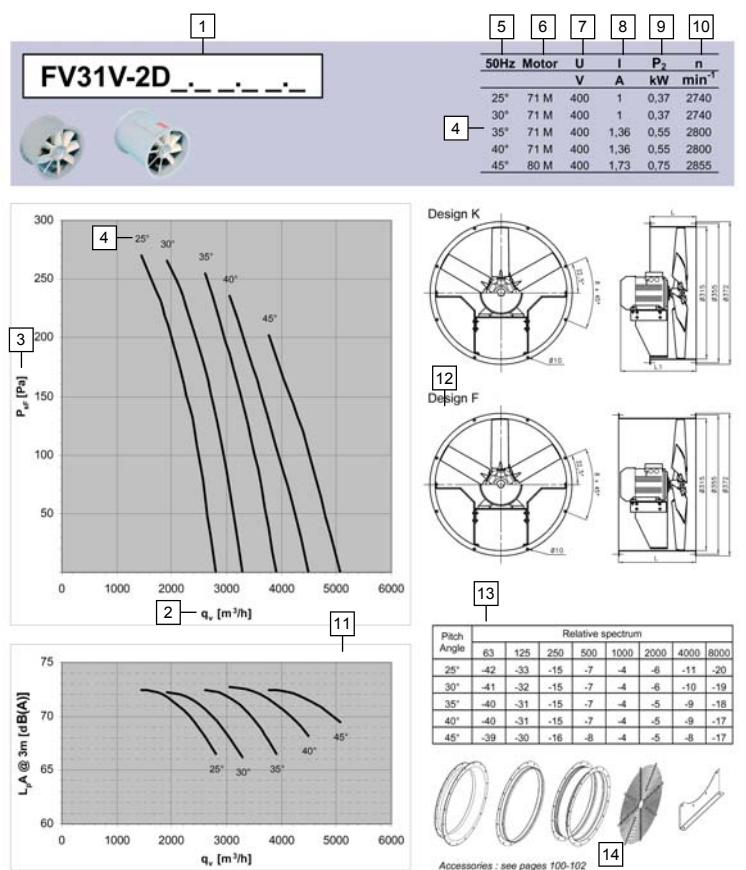

- Fertigung mit quadratischer Platte (alle Durchmesser) in kundenspezifischen Design
- Fertigung aus rostfreiem Edelstahl (304 oder 316L) oder Lackierung mit Polyester
- Laufrad mit Aluminiumschaufeln oder aus mit Glasfaser verstärktem Polypropylen (PPG)
- Motor
 - 2 Drehzahlen (separate Wicklungen oder Dahlander)
 - 60 Hz
 - PTO-Thermokontakte
 - Anwendung bei niedriger oder hoher Temperatur
 - Klemmkasten außen am Rohrkanal
 - Alle Optionen der IEC-Motoren
 -

Wir sind gerne bereit, Ihre spezifischen Anforderungen zu untersuchen. Stellen Sie uns auf die Probe!

Typenschlüssel

Luftmessungen:

Die Ventilatorkennlinien zeigen die statische Druckerhöhung Δp_{sf} in Pa als Funktion des Volumenstroms in m^3/h .

Die nachstehend dargestellten Kennlinien konnten auf Grund von zahlreichen Messungen aufgestellt werden.

Die Tests wurden gemäß Norm ISO5801 für Lufttechnik in unseren Labors durchgeführt (Labor "Invent" in Deutschland und Labor ZA-FMV in Frankreich)

Die Messungen erfolgten nach Einbauart Typ A, mit Rohrflansch, mit einer optimierten Einstromdüse, ohne Schutzgitter durchgeführt.

Einige Test wurden durch den CETIAT (zertifiziertes französisches Labor) bestätigt.

Der Ventilator ist frei ansaugend, frei ausblasend an die Meßkammer angebaut.

Akustische Messungen:

Die Tests wurden gemäß Norm ISO13347 für Akustik durchgeführt.

Die im Katalog in LP angegebenen A-gewichteten Schalldruckpegel werden berechnet auf der Basis von Schalldruckpegeln, die in Oktavbändern an der Saugseite des Ventilators gemessen werden.

Die Schalldruckpegelmessungen erfolgen nach dem Hüllflächenverfahren an 9 Punkten auf einer halbkugelförmigen Fläche, die in der Norm ISO 13347-3 beschrieben ist.

Die Gewichtung A berücksichtigt durch eine Korrektur im Oktavband die Empfindlichkeit des menschlichen Ohres auf bestimmte Frequenzen.

Ermittlung des Schallleistungspegels eines Ventilators ausgehend vom Schalldruckpegel in einem Abstand von 3 Metern:

$$L_w = L_p (@ 3m) + 10 \cdot \log (2 \cdot \pi \cdot R^2) + 20 \cdot \log (3), \quad \text{mit } R = 1$$

Ermittlung des Schallleistungspegels in Abhängigkeit des Spektrums im Oktavband:

$$L_w = 10 \cdot \log (\sum 10^{(0.1 \cdot L_{wi})}), \quad \text{mit } i = \text{Oktavband}$$

Labor "Invent", Ziehl-Abegg AG, Deutschland

Allgemeine Toleranzen:

- Förderleistung: $\pm 5\%$ der Nennleistung
- Schalldruck- und Schallleistungspegel: $\pm 3\text{dB}$
- Pro Oktavband: $\pm 5\text{ dB}$

Einströmdüse und dessen Auswirkung auf Luftleistung und Akustik:

Die Tests wurden mit einer optimierten Einströmdüse durchgeführt. Dadurch konnten:

- Die Integrationseffekte minimiert werden. Diese führen zu einer Verminderung des Volumenstroms und zum Auftreten einer instabilen Zone (Abrisspunkt) bei bereits niedrigeren Druck.
- Die Leistungsaufnahme des Ventilatormotors vermindert werden.
- Das Geräuschniveau insgesamt minimiert werden.

Außerdem ist die Sicherstellung eines korrekten Lufteintritts wichtig. Dieser ist gegeben, wenn der Ventilator unter Einhaltung eines saugseitigen Mindestabstandes von ca. 1 x dem Durchmesser des Ventilators installiert wird.

Wirkung des akustischen Systems und Schutzgitter:

Die Sicherheitsabstände in Bezug auf den Berührschutz sind in der Norm EN 294 festgelegt.

Wir empfehlen den Einsatz von Schutzgittern.

Die Schutzgitter erzeugen einen Widerstand beim Durchgang des Luftstroms, welcher einen Druckverlust Δp_{sf} für den Ventilator darstellt. Dieser Druckverlust steigt mit dem Quadrat der Ventilatorleistung.

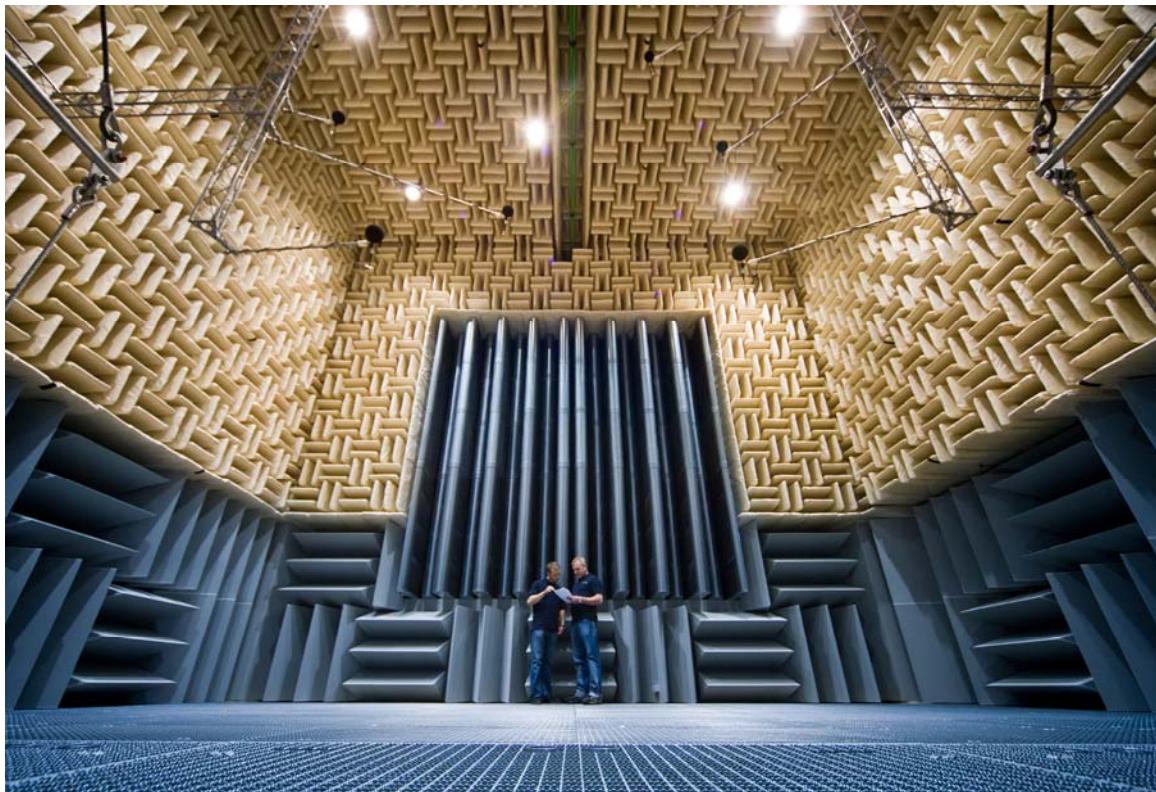

Der Stromverbrauch und der Schallpegel des Ventilators werden ebenfalls beeinflusst.

Die Schutzgitter werden als Zubehör angeboten.

Information über die Sicherheit:

Die Ziehl-Abegg Axialventilatoren sind für den Betrieb innerhalb von Systemen konzipiert und sind lediglich Bestandteile dieser Systeme.

Der Hersteller der Maschine muss die Sicherheitsbestimmungen gemäß Norm EN 294 für die Anlagen bzw. das System beachten.

Labor "Invent", Ziehl-Abegg AG, Deutschland

La gama MAXvent 2

La gama MAXvent 2 es el resultado por un lado de una gama existente desde hace varios años en el ámbito de la ventilación de media presión y por otro lado de los esfuerzos de los equipos de ZIEHL-ABEGG FMV para dar respuesta a las necesidades específicas en términos de prestaciones en ventilación, con bajos niveles sonoros y de amplitud de gama.

Se proponen dos configuraciones de serie: carcasa circular corta y larga, según las dimensiones de la norma EUROVENT. Gracias a su comprobado diseño y a los reconocidos componentes utilizados podemos garantizar la calidad y la fiabilidad de los ventiladores de la gama MAXvent 2.

Tanto en la actualidad como en el pasado, dedicamos nuestros recursos a la mejora de nuestra gama de ventilación con la finalidad de proporcionar las máximas prestaciones y de satisfacer el conjunto de sus exigencias técnicas.

Descripción técnica

La gama de ventiladores helicoidales MAXvent 2 está dotada con una hélice con álabes de poliamida reforzada con fibras de vidrio PAG) y una carcasa de aleación de aluminio (fundido) diseñado para aplicaciones que pueden ir hasta presiones totales de 1.000 Pa según el diámetro.

En función de la pérdida de carga de su instalación, del diámetro y de la velocidad de la hélice seleccionada, el caudal disponible puede alcanzar hasta 130.000 m³/h.

Los caudales se miden según la norma ISO 5801.

Una gama amplia:

La gama MAXvent 2 está disponible en 13 diámetros: 315, 355, 400, 450, 500, 560, 630, 710, 800, 900, 1000, 1250 y 1400 mm.

Los ventiladores de la gama MAXvent 2 están dotados con motores asincrónicos normalizados de rotor interior (IEC). Se trata de motores B3, IP55, clase F disponibles en 50Hz y corriente trifásica 230/400V 50 Hz hasta 2.2kW y 400/690V 50 Hz más allá, con protecciones PTC.

Según el diámetro, los motores están disponibles en 2, 4, 6 u 8 polos.

Para cada diámetro y cada velocidad de rotación, la gama tiene 5 ángulos de hélice, con un total de 185 combinaciones posibles, para responder a todas las demandas:

Ø	2 polos	4 polos	6 polos	8 polos
315	✓	✓		
355	✓	✓		
400	✓	✓	✓	
450	✓	✓	✓	
500	✓	✓	✓	
560	✓	✓	✓	
630	✓	✓	✓	✓
710		✓	✓	✓
800		✓	✓	✓
900		✓	✓	✓
1000		✓	✓	✓
1250		✓	✓	✓
1400			✓	✓

En función de su necesidad, podemos proponerle una carcasa cilíndrica corta o larga o una solución sobre placa cuadrada con las dimensiones adaptadas a su necesidad, ya sea en modo funda o en aplicación de proceso industrial. Además, bajo pedido están disponibles todas las opciones de motores normalizados.

Todos los elementos de los ventiladores de la gama MAXvent 2 están protegidos contra la corrosión y pueden ser pintados en cualquier RAL bajo pedido.

Configuraciones estándar

La gama de ventiladores MAXvent 2 está dotada de:

- Una hélice de material plástico, seleccionada específicamente para su aplicación y equilibrada según las prescripciones de la norma ISO 1940 (G = 6.3).
- Un motor IEC-IE2 B3, de marca SIEMENS o similar (prensaestopas no suministrado).
- Una carcasa circular de acero.

Acondicionamiento en palet.

Dos acabados anti-corrosión:

- Revestimiento de acero galvanizado o cincado
- Revestimiento de acero galvanizado en caliente

Estos ventiladores pueden funcionar indiferentemente con eje horizontal o vertical y están disponibles en ambos sentidos de flujo de aire.

Estos ventiladores tienen un acoplamiento directo: la rueda está directamente situada en la punta del árbol del motor.

Pueden ser utilizados en todas las aplicaciones en que el aire transportado es limpio, sin polvo.

La temperatura del flujo de aire debe estar entre -30°C y +50°C para los ventiladores de la gama "Standard temperature range" y -30°C y +60°C para los ventiladores de la gama "Increased Temperature Range".

Accesorios

Variadores de velocidad, patas de montaje, tacos antivibración, virolas de entrada de aire, contrabridas, virolas elásticas, rejillas de protección (lado hélice o lado motor).

Configuraciones especiales

La compañía Ziehl-Abegg FMV puede suministrar configuraciones a medida que responden a las necesidades de sus clientes, como:

- Fabricación con placa cuadrada (todos los diámetros), adaptada al entorno del cliente.
- Fabricación de acero inoxidable (304 ou 316L) o pasivado con pintura en polvo de poliéster.
- Hélice con pala de aluminio o de polipropileno con aditivos de fibra de vidrio (PPG)
- Motor
 - 2 velocidades (bobinas separadas o Dahlander)
 - 60Hz
 - Termostancias PTO
 - Utilización en baja o alta temperatura
 - Caja de bornes desplazada hacia la carcasa
 - Todas las opciones de los motores IEC
 -

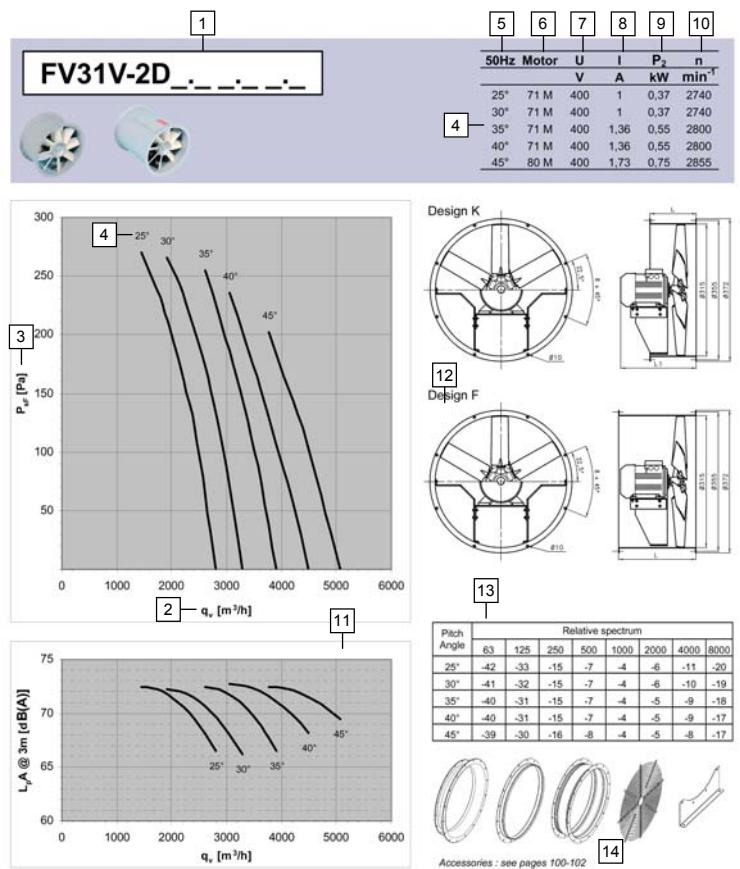

Estudiamos todas las posibilidades de nuestra gama estándar.

Designación

Mediciones de caudal:

Las curvas características del ventilador muestran el aumento de pérdida de carga Δp_{sf} en Pa, en función del caudal en m^3/h .

Las pruebas han sido realizadas según ISO 5801 y dentro de nuestros laboratorios (laboratorio "Invent" en Alemania y el laboratorio ZA-FMV en Francia).

Todo un conjunto de mediciones realizadas en nuestros laboratorios nos han permitido elaborar las curvas presentadas abajo.

Las mediciones han sido realizadas en tipo A, con embocadura circular larga, con embocadura alta, sin rejilla de protección.

Algunas pruebas han sido corroboradas por el CETIAT (laboratorio francés homologado).

El ventilador está instalado en un cajón de mediciones con entrada y salida libres.

Mediciones acústicas:

Las pruebas han sido realizadas según ISO 13347 para la acústica.

Las potencias acústicas ponderadas A en L_w se calculan a partir de niveles de presión acústica en bandas de octava medidas en la aspiración del ventilador.

Las presiones de nivel acústico se miden según el método de la superficie envolvente en 9 puntos, sobre una superficie hemisférica descrita en la norma ISO 13347-3.

La ponderación A tiene en cuenta la sensibilidad del oído humano a determinadas frecuencias con una correlación en banda de octava.

Determinación del nivel de potencia acústica de un ventilador a partir del nivel de presión acústica a 3 metros:

$$L_w = L_p(@ 3m) + 10 \cdot \log(2 \cdot \pi \cdot R^2) + 20 \cdot \log(3), \quad \text{donde } R = 1$$

Determinación del nivel de potencia acústica en función del espectro en gama de octavas:

$$L_w = 10 \cdot \log(\sum 10^{(0.1 \cdot L_{wi})}), \quad \text{donde } i = \text{bandas de octavas}$$

Cuidado: Algunos estándares nacionales de mediciones (Ej. BS 848) utilizan mediciones realizadas a distancias diferentes de las normas vigentes y esto puede suponer disminuciones significativas en función del tamaño del ventilador.

Laboratorio "Invent", Ziehl-Abegg AG, Alemania

Tolerancias generales:

- En los caudales: $\pm 5\%$ del caudal nominal
- En los niveles de presión y de potencia sonora: $\pm 3\text{dB}$
- Por banda de octava: $\pm 5\text{dB}$

Embocaduras y sus efectos en la aeráulica y la acústica:

Las pruebas han sido realizadas con una mariposa de entrada optimizada, que permite:

- Minimizar los efectos de integración, responsables de la disminución del caudal y de la aparición de un punto de bombeo a una presión más baja de lo previsto.
- Optimizar el consumo del motoventilador.
- Minimizar el ruido de integración y de bombeo.

Además, es importante asegurar una entrada de aire correcta cuando el ventilador está instalado, dejando una distancia mínima igual a su diámetro.

Efecto en el sistema acústico y rejilla de protección:

Las distancias de seguridad para prevenir el acceso a las zonas peligrosas se especifican en la norma EN 294.

Con esta finalidad, aconsejamos utilizar rejillas de protección. Las rejillas ocasionan una resistencia al paso del flujo de aire que supone aumento en la pérdida de carga Δpsf para el ventilador; esta pérdida de presión aumenta con el cuadrado del caudal del ventilador.

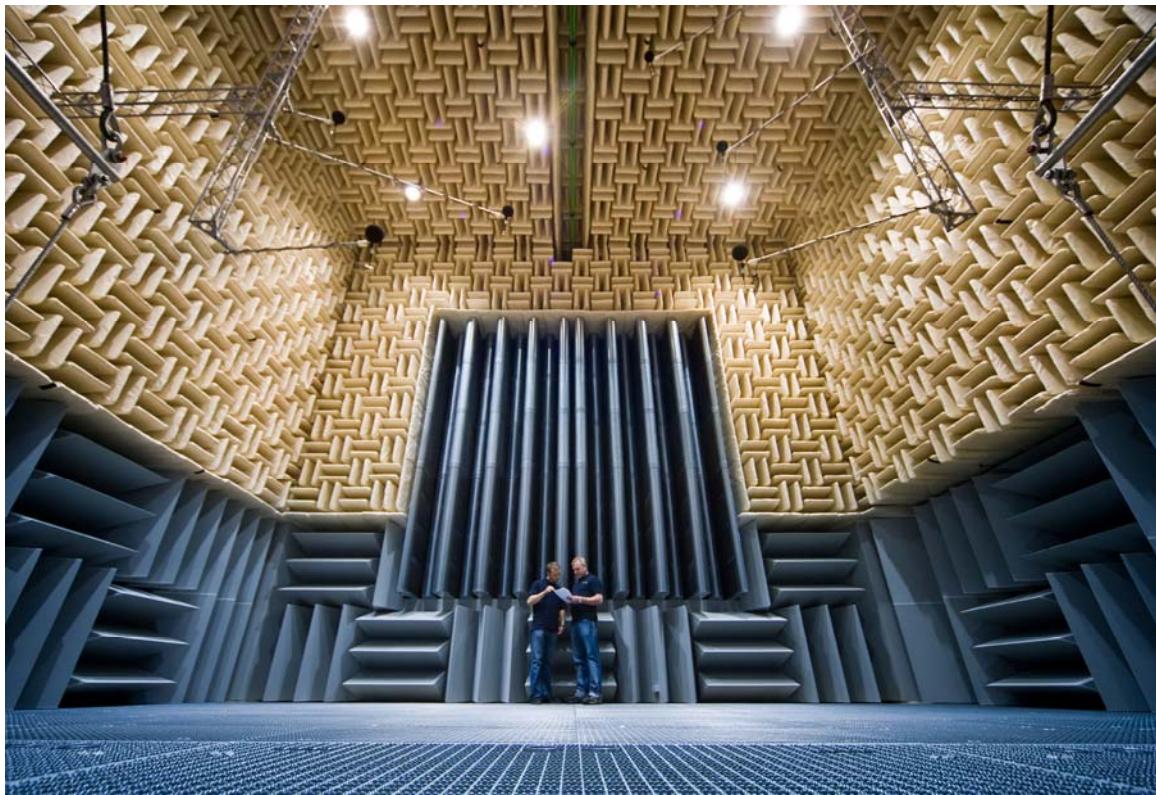

El consumo eléctrico y el nivel acústico del ventilador también se encuentran modificados.

Las rejillas de protección están disponibles como accesorios.

Información sobre la seguridad:

Los ventiladores axiales Ziehl-Abegg están diseñados para funcionar en el interior de sistemas y sólo son componentes de estos sistemas.

El fabricante de la máquina debe cumplir las especificaciones de seguridad de los equipos o del sistema, como lo especifica la norma EN 294.

Laboratorio "Invent", Ziehl-Abegg AG, Alemania

La gamma MAXvent 2

La gamma MAXvent 2 ha origine da una parte da una gamma esistente da molti anni nel campo della ventilazione a media pressione e dall'altra parte dagli sforzi dell'equipe ZIEHL-ABEGG FMV per rispondere ai vostri bisogni specifici in termini di prestazioni aerauliche, di basso livello sonoro, di vantaggi tecnici e di ampiezza di gamma.

Sono proposte due configurazioni in standard: cassa d'alloggiamento corta o lunga secondo le dimensioni della norma EUROVENT. Grazie al suo design collaudato ed ai componenti di marca utilizzati, possiamo garantire la qualità e l'affidabilità dei ventilatori della gamma MAXvent 2.

Dedichiamo oggi come ieri tutte le nostre risorse al miglioramento della gamma dei ventilatori allo scopo di fornirvi il massimo delle prestazioni e di soddisfare l'insieme delle vostre esigenze tecniche.

Descrizione tecnica

La gamma di ventilatori elicoidali MAXvent 2 è equipaggiata di una girante con pale in poliammide rinforzato in fibra di vetro (PAG) e un mozzo in lega d'alluminio pressofuso progettato per applicazioni che possono raggiungere delle pressioni totali di 1000 Pa a seconda del diametro.

In funzione della perdita di carico della vostra installazione, del diametro e della velocità della girante scelta la portata disponibile può raggiungere i 130.000 m³/h.

Le portate sono misurate secondo ISO 5801.

Una vasta gamma:

La gamma MAXvent 2 è disponibile in 13 diametri: 315, 355, 400, 450, 500, 560, 630, 710, 800, 900, 1000, 1250 e 1400 mm.

I ventilatori della gamma MAXvent 2 sono equipaggiati con motori asincroni a rotore interno normalizzati (IEC). Si tratta di motori a staffe B3, IP55, classe F disponibili in trifase 230/400V 50Hz fino a 2,2kW e 400/690V 50Hz ed oltre con protezione tramite termistori PTC.

A seconda del diametro, i motori sono disponibili in 2 poli, 4 poli, 6 poli o 8 poli.

Per ogni diametro ed ogni velocità di rotazione la gamma comporta 5 angoli d'inclinazione pala, in totale 185 combinazioni possibili al fine di rispondere a tutte le richieste:

Ø	2 poli	4 poli	6 poli	8 poli
315	√	√		
355	√	√		
400	√	√	√	
450	√	√	√	
500	√	√	√	
560	√	√	√	
630	√	√	√	√
710		√	√	√
800		√	√	√
900		√	√	√
1000		√	√	√
1250		√	√	√
1400			√	√

In funzione delle vostre necessità, possiamo proporvi soluzioni con cassa d'alloggiamento corta o lunga o una soluzione su piastra quadrata, alle dimensioni adatte alle vostre richieste, sia per applicazioni in sistemi canalizzati che per impieghi in processi industriali.

Inoltre sono disponibili su richiesta tutte le opzioni dei motori normalizzati.

Tutti i componenti dei ventilatori della gamma MAXvent 2 sono protetti contro la corrosione e possono essere verniciati su richiesta.

Configurazioni standard

La gamma di ventilatori MAXvent 2 è equipaggiata:

- da una girante in materiale composito selezionata da noi per la vostra applicazione ed equilibrata secondo le prescrizioni della norma ISO 1940 (G = 6.3)
- da un motore IEC-IE2 a staffe B3 di marca SIEMENS o simile (pressacavo non in dotazione)
- da una cassa d'alloggiamento in acciaio.

Imballo su pallet.

Due finiture anticorrosione:

- Cassa in acciaio galvanizzato o zincato a freddo
- Cassa in acciaio galvanizzato a caldo

Questi ventilatori possono funzionare indifferentemente con l'asse orizzontale o verticale e sono disponibili per entrambi i sensi del flusso d'aria.

Questi ventilatori sono in accoppiamento diretto: la girante è posizionata direttamente all'estremità dell'albero motore.

Nella configurazione Standard, possono essere utilizzati per tutte le applicazioni in cui l'aria veicolata è pulita, non polverosa.

La temperatura del flusso d'aria deve essere compresa tra – 30°C e +50°C per i ventilatori della sezione «Standard temperature range» e -30°C e +60°C per i ventilatori della sezione «Increased Temperature Range».

Accessori

Variatori di velocità, piedi di montaggio, giunti anti-vibranti, bocagli d'aspirazione, contro-flange, giunti elastici, griglie di protezione (lato girante o lato motore).

Configurazioni speciali

Ziehl-Abegg FMV può offrire delle esecuzioni speciali che rispondono al meglio alle necessità del cliente come:

- Costruzione con pannello quadrato (qualsiasi diametro) adatto all'ambiente del cliente
- Costruzione in acciaio inossidabile (304 o 316L) o rifiniture in vernice polvere poliestere
- Girante con pale in alluminio o polipropilene caricato con fibra di vetro (PPG)
- Motore
 - 2 velocità (avvolgimento separato o Dahlander)
 - 60Hz
 - Termistori PTO
 - Uso bassa o alta temperatura
 - Morsettiera sulla cassa d'alloggiamento
 - Tutte le opzioni dei motori IEC
 -

Prenderemo in esame qualsiasi richiesta diversa dai nostri prodotti standard....

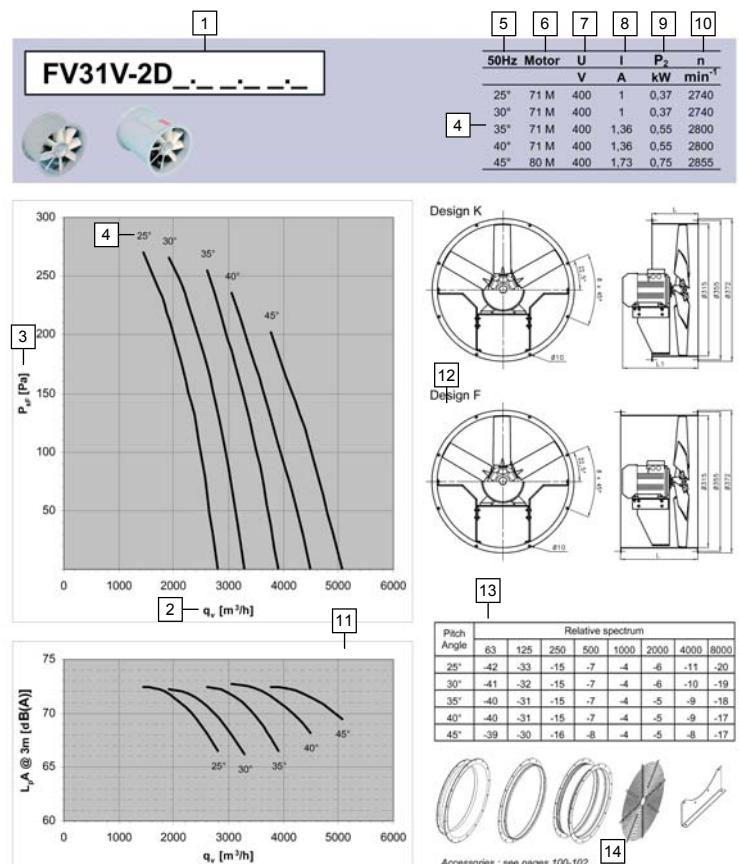

Consultateci!

Designazione

Misure aerauliche:

Le curve caratteristiche del ventilatore indicano l'aumento di pressione Δpsf in pascal in funzione della portata in m³/ora.

I test sono stati effettuati secondo ISO5801 per l'aeraulica e nei nostri laboratori (laboratorio "Invent" in Germania e laboratorio ZA-FMV in Francia).

Tutto un insieme di misure effettuate nei nostri laboratori ci hanno permesso di tracciare le curve presentate qui di seguito.

Le misure sono state effettuate in tipo A, con un casing lungo, con un boccaglio d'ingresso d'aria ottimizzato, senza griglia di protezione.

Alcuni test sono stati convalidati dal CETIAT (laboratorio francese approvato).

Il ventilatore è installato in un cassone per misure con ingresso e uscita liberi.

Misure acustiche:

I test sono stati effettuati secondo ISO13347 per l'acustica.

Le potenze acustiche ponderate A in L_w sono calcolate partendo dai livelli di pressione acustica in bande di ottava misurate durante l'aspirazione del ventilatore.

I livelli di pressione sonora sono misurati secondo il metodo della superficie avvolgente in 9 punti sulla superficie semisferica descritta nella norma ISO 13347-3.

La ponderazione A tiene conto della sensibilità dell'orecchio umano a certe frequenze tramite una correzione in banda d'ottava.

Determinazione del livello di potenza acustica di un ventilatore partendo dal livello di pressione acustica a 3 metri:

Determinazione del livello di potenza acustica in funzione dello

$$L_w = L_p (@ 3m) + 10 \cdot \log (2 \cdot \pi \cdot R^2) + 20 \cdot \log (3), \quad \text{con } R = 1$$

spettro in gamme di ottave:

$$L_w = 10 \cdot \log (\sum 10^{(0.1 \cdot L_{wi})}), \quad \text{con } i = \text{banda di ottave}$$

Attenzione: alcuni vecchi standard di misure nazionali (es. BS 848) si affidano a misure effettuate a distanze diverse dalle norme vigenti; questo può dar luogo a sottovalutazioni significative a seconda delle dimensioni del ventilatore.

Laboratorio "Invent", Ziehl-Abegg AG, Germania

Tolleranze generali:

- Sulle portate: $\pm 5\%$ della portata nominale
- Sui livelli di pressione e di potenza acustica: $\pm 3\text{dB}$
- Per banda di ottava: $\pm 5\text{dB}$

Boccagli d'ingresso d'aria ed effetti sull'aeraulica e l'acustica:

Le prove sono state effettuate con un boccaglio d'ingresso d'aria ottimizzato, che permette:

- di ridurre gli effetti d'integrazione responsabili della riduzione della portata e dell'apparizione di un punto di pompaggio a una pressione inferiore a quella prevista
- di ottimizzare il consumo del motoventilatore
- di ridurre il rumore d'integrazione e di pompaggio

D'altronde è importante assicurare un buon ingresso d'aria quando il ventilatore è installato, pur rispettando una minima distanza di circa 1 volta il diametro del ventilatore.

Effetto sistema acustico e griglia di protezione:

Le distanze di sicurezza per evitare l'accessibilità alle zone pericolose sono specificate nella norma EN 294.

A tale scopo raccomandiamo l'uso delle griglie di protezione. Le griglie provocano una resistenza al passaggio del flusso d'aria, che rappresenta una perdita di pressione Δp_{sf} per il ventilatore; tale perdita di pressione aumenta con il quadrato della portata del ventilatore.

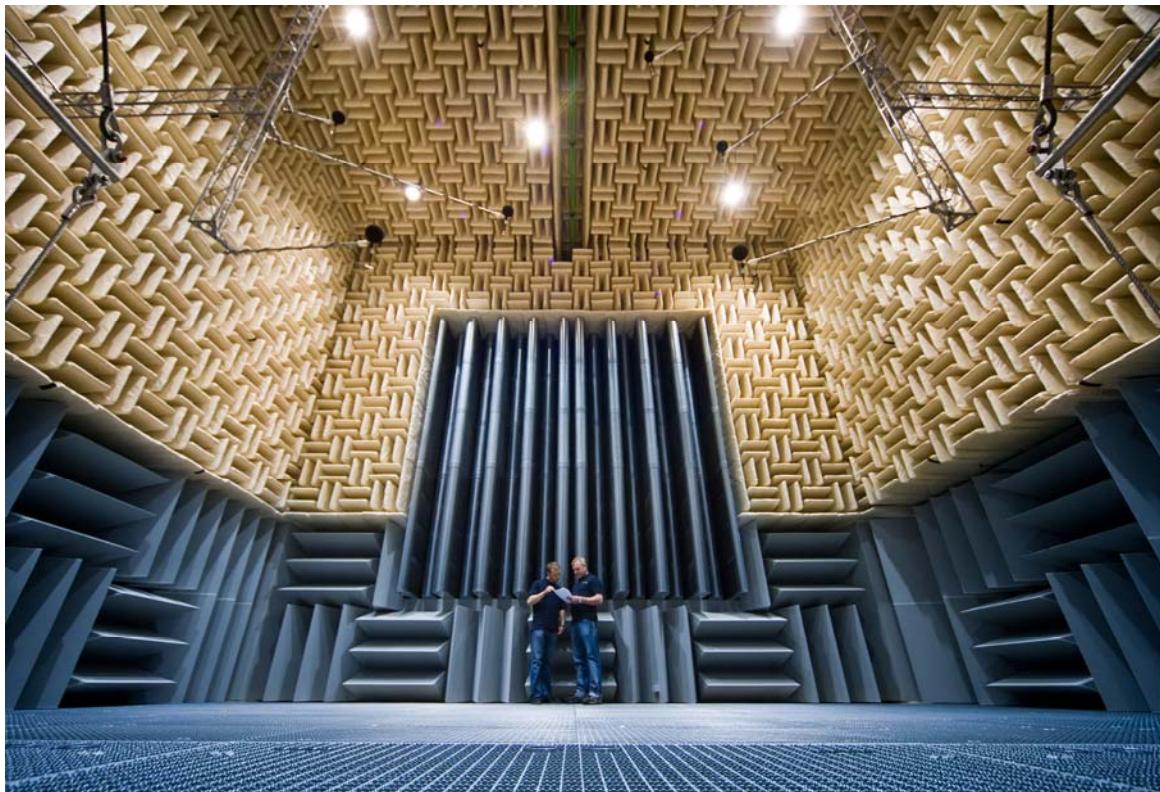

Il consumo elettrico e il livello sonoro del ventilatore sono ugualmente interessati.

Le griglie di protezione sono proposte come accessori.

Informazione sulla sicurezza:

I ventilatori assiali Ziehl-Abegg sono predisposti per funzionare all'interno dei sistemi e sono soltanto componenti degli stessi.

Il produttore della macchina deve conformarsi alle specifiche di sicurezza delle attrezzature o del sistema secondo la norma EN 294.

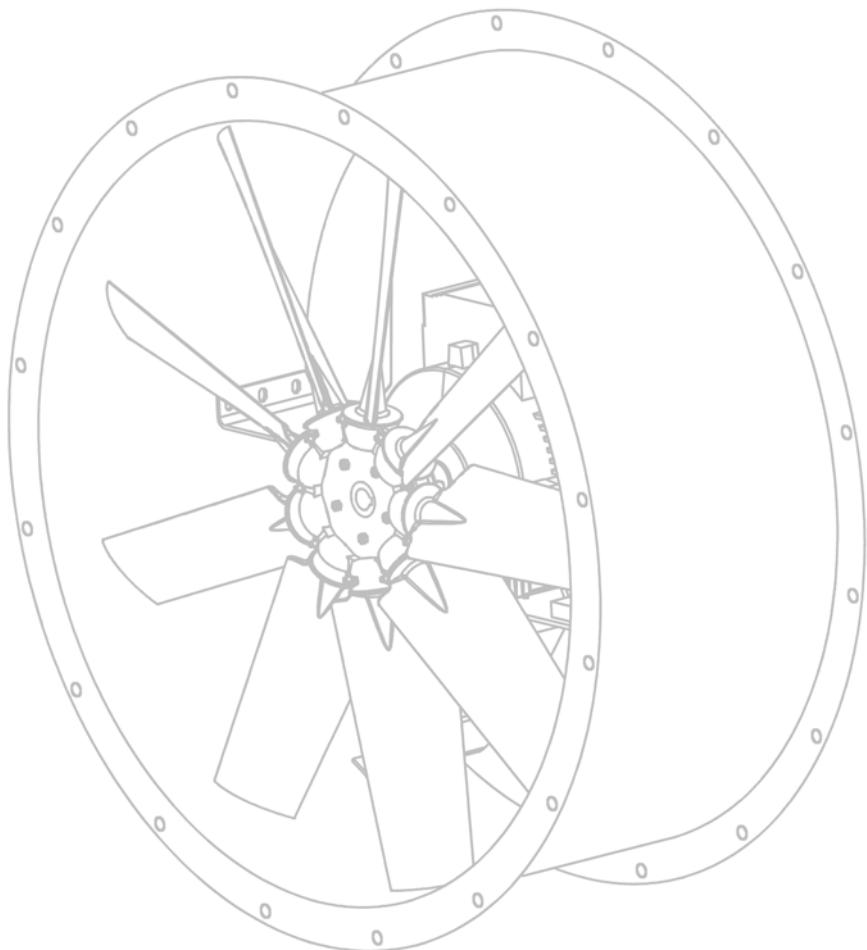

Laboratorio "Invent", Ziehl-Abegg AG, Germania

MAXvent AXIAL FAN DEFINITION

Date	<input type="text"/>	Qty of fans per year	<input type="text"/>
Company	<input type="text"/>	Qty of fans per batch	<input type="text"/>
Project	<input type="text"/>		
Application	<input type="text"/>		
Size:	<input type="text"/> mm		
Impeller type	<input checked="" type="checkbox"/> PPG: <input type="checkbox"/>	PAG ^(*)	<input type="checkbox"/> ALU
Explosion-proof:	<input type="checkbox"/>		
Fan Selection:			
Air volume	<input type="text"/> m ³ /h		
Static pressure drop	<input type="text"/> Pa	Expected running time	<input type="text"/> hour/year
Airflow temperature	<input type="text"/> °C Max	Expected diameter	<input type="text"/> mm
	<input type="text"/> °C Min	Expected speed rotation	<input type="text"/> rpm
Ambient temperature	<input type="text"/> °C Max	Expected motor power	<input type="text"/> kW
	<input type="text"/> °C Min	Expected sound level	<input type="text"/> LWA(dB)
Altitude	<input type="text"/> m		
Relative humidity	<input type="text"/> % at <input type="text"/> °C		
Motor:			
Supply voltage	<input type="text"/> V	+/- <input type="checkbox"/> % (+/-5%)	
Frequency	<input type="text"/> Hz	+/- <input type="checkbox"/> % (+/-2%)	
Insulation class	<input type="text"/> F ^(*) or H	<input type="checkbox"/> 3-phase <input type="checkbox"/> 1-phase	
Protection class	<input type="text"/> IP55 ^(*)	<input type="checkbox"/> 1 speed <input type="checkbox"/> 2 Speeds	
Thermal protection	<input type="text"/> PTO / PTC	<input type="checkbox"/> Speed controllable	
Required certificates	<input type="text"/> (CE/UL/CSA/NEMA/others)		
Other option	<input type="text"/>		
Construction and installation (see catalogue drawings):			
Casing	<input type="checkbox"/> Long	<input type="checkbox"/> Short	
Motor shaft position	<input type="checkbox"/> Horizontal	<input type="checkbox"/> Up	<input type="checkbox"/> Down
Airflow direction	<input type="checkbox"/> Motor->impeller	<input type="checkbox"/> Impeller->motor	
Number of starts per day	<input type="text"/>		
Specific dimensions	<input type="text"/> (please attach drawing or sketch)		
Surface treatment:	<input type="checkbox"/> Galvanized	<input type="checkbox"/> Hot dip galvanized	<input type="checkbox"/> Other <input type="text"/>
	<input type="checkbox"/> Paint	RAL <input type="text"/>	<input type="checkbox"/> Salt fog Capability (h) <input type="text"/>
Environment category (ISO12944)	<input type="text"/> C1/C2/C3/C4/C5i/C5M		
Required certificates	<input type="text"/>		
Accessories:			
	<input type="checkbox"/> Bellmouth inlet	<input type="checkbox"/> Set of mounting feet	
	<input type="checkbox"/> flexible connection	<input type="checkbox"/> Anti-vibrating mounts	
	<input type="checkbox"/> Matching flange	<input type="checkbox"/> Speed controller	
	<input type="checkbox"/> Impeller side fan guard		
	<input type="checkbox"/> Motor side fan guard		
	<input type="checkbox"/> Square top plate (specify dimensions)		
General / Commercial:			
Current solution:	<input type="text"/>		
Target price:	<input type="text"/>		
Other informations:			
Duty point conditions : From calculation, existing fan, supplier, measures, catalog, impeller data sheet? Type A,D? Long casing, short casing? With/without inlet cone? With x grids?...			
(*) Standard configuration in bolded characters
